

THE AERO SKI MODEL R2800 "FULLY RETRACTABLE SKI"

Aero Ski now has an STC'd installation for the Steel Gear Champion (Bellanca) models. Included in the package are detail improvements to the basic aircraft. Heavy duty ski axles increase strength at this point and a special bar assm. replaces the landing gear U-Bolt.

This Aero Ski R2800 installation is the first successful retractable installation for Champs and allows their owners the fun and utility that these great airplanes offer.

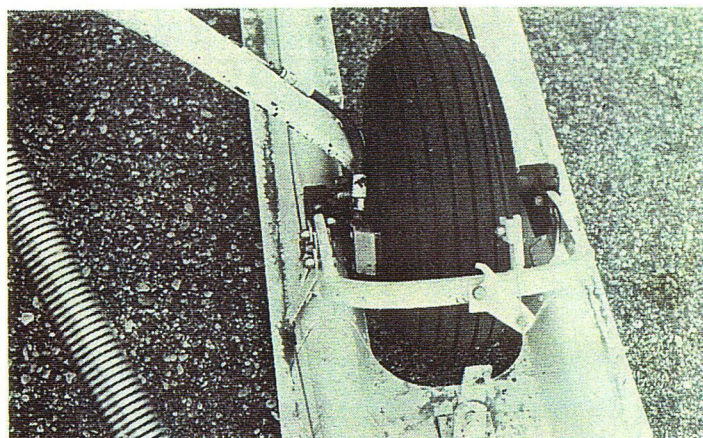

SPECIFICATIONS

MODEL	R2800
WIDTH	18"
LENGTH	71"
WEIGHT	42 Lbs. Ea
SKI GROSS LTD.	To 2800 Lbs.
INSTALLED WT.	106 Lbs.

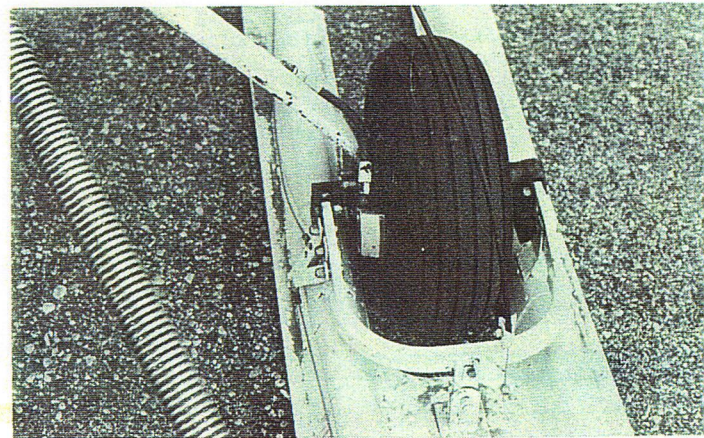

Unlike wheel penetration skis which do half the job the R2800 locks down when needed for take-off in the "really tough conditions".

- Snow landings can be done with skis up or down.
- Landing on a hard surface is done with simple, efficient cable releases to raise skis in flight.
- All mechanical action - - no hydraulic system to install or maintain.
- Lighter than other retractables.
- Plastic bottoms reduce drag & minimize freeze down.
- Skis maintain proper flight level attitude in either position.
- Can be installed in less time than other retractable systems.

"SKI UP"

"SKI-DOWN"
